

DIABETIC FOOT WEBINAR

Therapeutic footwear for preventing diabetic foot ulcers outside and inside home.

LIVE **April 29** 2020 - Starting at 4:30pm till 7:00pm (CET).

ABSTRACT

COVID-19 crisis has changed our lives and the ways to treat DF patients, especially in those countries who suffer the lockdown period.

The close follow-up and patient's compliance are key in preventing DFU, and one of the main factors is the continuous use of Therapeutic Footwear whole the day, regardless of the patient is at home or outside. Maintain this recommendation is quite difficult during quarantine, and we should keep in contact with the patients and explain to them how important is to keep their feet protected. Additionally, the development of some complications such as foot infection could increase the risk of limb loss more during these days.

AGENDA

Prof. Andrew Boulton - Diabetic foot protection: from Malvern 1986 to Malvern 2021.

Prof. José Luis Lázaro - The clinical evidence of Therapeutic Footwear: the benefit of its use at home.

Dr. Kristien Van Acker - In "Corona time": how the Diabetic Foot team can do something.

Dr. Roberto Anichini - The Telemedicine.

Prof. Luigi Uccioli - Biomechanics of Diabetic Foot.

Dr. Camillo Buratto - Therapeutic shoes: the details that make the difference.

Prof. Carlo Caravaggi - Acute phase: the role of surgery, to help the correct orthotic treatment.

Dr. Roberto Da Ros - Offloading

FOCUS CLINICAL CASES

The triage and the choice of footwear according to the risk level.

Dr. Roberto Da Ros: High risk with Therapeutic shoes - Offloading of forefoot ulcer.

Prof. José Luis Lázaro: Very high risk with Therapeutic shoes.

O.S.M. Herbert Türk: Very high risk with custom made shoes.
